

Forensic Photography Scale

Only \$14.75 includes shipping & handling

Black Printing
on Gray Plastic

Florescent
Printing on Gray
Plastic

Each Template 3"X 5"

This set is designed to assist the forensic photographer/criminal investigator in the photo documentation of physical evidence including tool marks, latent prints and other trace evidence. Two piece set includes **black on gray** and UV model with **fluorescent orange on gray**. Printed with both inch and metric graduated markings. Circular and square cut outs allow scale to surround evidence being photographed. This two-template set comes in a sturdy black leatherette carrying case.

Forensic Photography Mirror or Tactical Search Mirror

Only \$13.00 includes shipping & handling

Backside of mirror
shown above

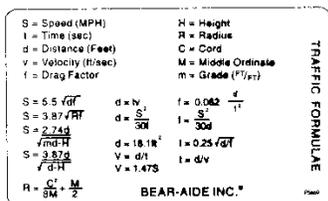

The high quality 3"X5" plastic mirror has many uses. The mirror can direct light into crevices and under vehicles or side light footwear/tire impressions for photographic purposes. It is also excellent for looking around corners in tactical situations. The opposite side of the mirror is **gray** with the same scale as the Forensic Photography Scale (model #4567) printed in black. Since there are no cut outs, small objects (such as bullets) can be placed on the gray surface within the scale areas for accurate photo documentation. The mirror comes in a sturdy black leatherette carrying case.

Report Lettering Guide Only \$9.00 includes shipping & handling

The **Report Lettering Guide** is the same size and material as the Double Traffic Template Set, the Boat Template Set and the Sniper Template and will fit in the leatherette case provided with each of those products. The 4" X 8" size means it will also fit in most ticket book holders. The lettering guide has two different size slots (1/4" and 3/16") for printing. The guide lines printed on the template can be used to achieve even spacing between lines.

Formula Card Only \$5.75 includes shipping & handling

Actual Size 3" x 5"

This handy (3"x5") plastic card contains a large variety of formulae used in determining skid and other traffic accident reporting parameters. These formulae are printed with special non-flaking ink on easy to read green plastic.
